

# TIPS TRICKS AND HOW TO...

## Use the Unsharp Mask Filter

To make a portion of your photograph really stand out, make a selection around that object in your picture. Make sure you have the correct layer selected. From the menu bar, choose “**Filter**,” “**Sharpen**,” then “**Unsharp Mask**.”

Increase or decrease the amount of sharpness as well as the radius and threshold. Make sure the “**Preview**” option is selected to allow you to view how the different settings are affecting your photograph. Click “**OK**” when you have finished.
