

TIPS TRICKS^{AND} HOW TO...

Use Typography

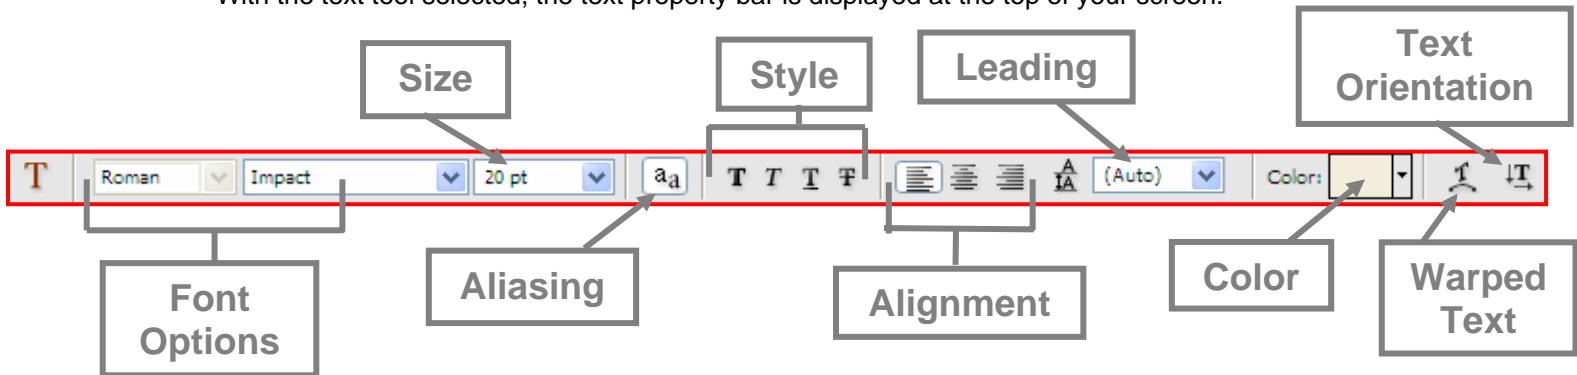

The type tool allows you to type directly on your image or canvas. You can apply effects and styles to your text just as you would any other layer.

You can choose to display your text horizontally or vertically. Text can also be used as a mask tool. These additional options are available under the text tool dropdown box.

Text Property Bar

With the text tool selected, the text property bar is displayed at the top of your screen.

Apply Effects to Text

You can apply effects to your text to create a unique text look. To apply an effect, type your text and then select your text layer on your layer's palette.

Select the desired effect from the "Filter" menu.

**** Note:** Once an effect has been applied, you can no longer edit that text. Make sure it is correct and all text options have been applied before applying a filter.
